TDP 2026 Project

Project brief - Personal Carbon Footprint & Savings Advisor

- **Project brief**
- Format
- Sprint Flow
- Support

Project background

Banks are increasingly focusing on sustainability and financial wellbeing. This prototype application will help customers understand the environmental impact of their spending and suggests cost-saving behavioural changes.

This project will help customers understand:

- how their spending impacts on the environment
- where they can they can reduce carbon emissions
- how they can save money through behavioural changes

The goal is to combine financial awareness with sustainability awareness.

- **Project brief**
- Format
- Sprint Flow
- Support

By the end of the project, your team will deliver a working MVP that allows a customer to:

- submit monthly spending data
- calculate estimated carbon impact
- receive category-based recommendations
- estimate the potential savings
- track progress over time
- complete sustainability challenges

TDP 2026 Project

Project brief - 2

The Core Objectives

Build an application that:

- accepts spending category input
- retrieves emissions factors from SQL
- calculates estimated carbon output
- generates recommendation logic
- provides a customer dashboard
- stores data locally or in Azure
- supports CI through GitHub
